# On the Subject of Purple Arrows

Word Points!

On the module are 4 directional buttons, a displayed scrambled word, and a pressable display screen in the middle.

If the buttons are not Purple, you're looking at a different module.

The module is linked to the 6-word table below, and starts at a random word in the table. Use the directional buttons to move through the table to different words. Only the first letter of the current word is displayed. The scrambled word in the top left of the module is the ending word, unscramble it to figure out which word to end on. Press the letter display when the current word is the ending word to disarm the module.

If the defuser attempts to go outside of the table the module will not register a Strike, but instead cause a brief pause to occur in the display (normal word changes update instantly).

Pressing the letter display on an incorrect word will register a Strike, and the module will reset itself with a new starting word and scrambled word.
